

FBI Enterprise Software Engineering and Support Services

The primary focus of the FBI Enterprise Software Engineering and Support Services contract (ITSSS STOR 90C) is to provide operations and maintenance (O&M) and engineering professional services support for current and future task initiatives within the Enterprise Applications and Database Service Section (EADSS) of the Information Technology Application Division (ITAD). STOR 90C will support EADSS' ongoing delivery of software applications, data services, and database development and management to support FBI business operations including financial, human resource, asset management, and similar capabilities. STOR 90C is the third task order for Technica as a Prime holder of the FBI ITSSS Blanket Purchase Agreement (BPA) and an important vehicle for future innovations at the FBI.

Technica FBI IT Triple S Team

Technica has assembled an integrated team with experience supporting FBI across the full program lifecycle, including engineering, development, integration, O&M and testing tasks that now fall under the EADSS. The Technica STOR 90C team will support programs and projects to accomplish FBI mission goals for both legacy system O&M and engineering support for new requirements. The Team's experience includes deployment and support for enterprise-level FBI systems including:

- Enterprise Remote Access Service
- Mobility Program Management Office
- Technology Administrative Portal
- Big Data management
- Sentinel Software Development Environment
- Centralized Tiered Solution (CTS) enhanced and distributed storage architecture
