

# Continuous Monitoring as a Service

## Phase 1: Endpoint Integrity

The Continuous Diagnostics and Mitigation (CDM) Tools and Continuous Monitoring as a Service (CMaaS) blanket purchase agreement (BPA) will provide federal, civilian, and defense agencies with the ability to enhance and automate their existing continuous network monitoring capabilities. They will also be able to correlate and analyze critical security-related information, and improve risk-based decision making at the agency and federal enterprise level. The Department of Homeland Security (DHS) has been charged with overseeing government cybersecurity efforts. Funding for this initiative is available through DHS, to ensure a consistent approach to CDM across “.gov” networks and allow for collection of uniform cybersecurity data feeds to a centralized DHS cybersecurity dashboard.

## General features of this contract include:

- Multiple award, indefinite delivery, indefinite quantity (IDIQ) contract vehicle
- Five-year period of performance
- Worldwide geographic scope
- \$6 billion program ceiling
- GSA-based pricing allows for easy market research and price comparison
- Single source for both professional services and IT products and supplies

## BPA INFORMATION

### Full Title:

Continuous Diagnostics and Mitigation Tools and Continuous Monitoring as a Service

### BPA Number:

GS00T13AJA0024

### Period of Performance:

Base Year + 4 Option Years  
(8/9/2013–8/11/2018)

### Ceiling Value:

\$6 Billion

### Contact:

Helen Kelly  
Program Manager

## OUR CDM-CMaaS SERVICES

- Cybersecurity Engineering and Support
- Systems Engineering
- Software Development
- Assessment and Authorization
- Project and Program Management
- Independent Verification and Validation
- Endpoint Integrity

**Technica**<sup>®</sup>

Technica provides federal, civilian, and defense agencies with a suite of cyber defense and monitoring applications from Symantec Corporation to support Endpoint Integrity on Phase 1 of the DHS CDM-CMaaS BPA. Symantec is a world leader in Endpoint Integrity tools including anti-virus, intrusion protection, and hardware and software asset management software. Technica offers Symantec’s proven Control Compliance Suite of Hardware and Software Asset Management (HWAM and SWAM) software, complemented by Symantec Vulnerability Manager, Symantec Endpoint Protection and other products to support Configuration (CM) and Vulnerability Management (VUL). The flexible nature of this BPA allows customers to purchase and implement the technology they need, along with the services required to integrate this technology with their existing cybersecurity tools. There are three ways to use the DHS CDM-CMaaS BPA to order cybersecurity tools and services:

1. DHS Processes via Memorandum of Agreement to procure CDM products or services (eligible for DHS funding).
2. Compete requirements using AAS Federal Systems Integration and Management Center (FEDSIM) for assisted acquisition support using own funding (available now to Department of Defense (DoD) and federal agencies).

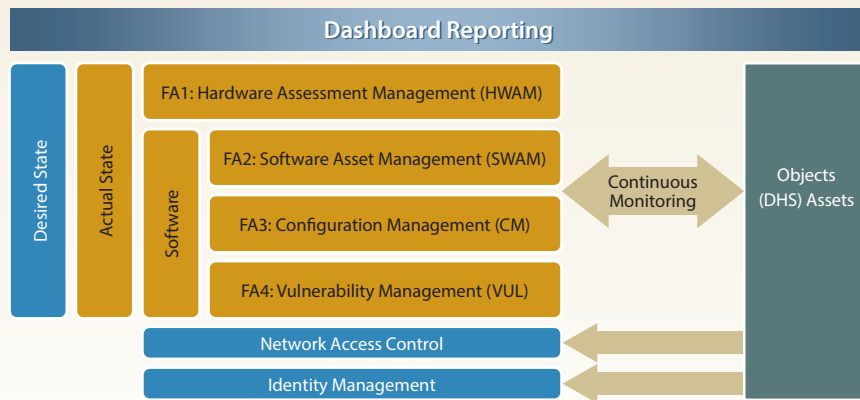

3. Direct Order/Direct Bill: Compete requirements directly to the BPA using own funding (available now to federal agencies, DoD, state, local, regional, tribal, and territories).
  - Use of a Delegated Procurement Authority with GSA.

Technica is a Symantec Enterprise Services Provider and currently provides Symantec NetBackup enterprise storage in a Software as a Service (SaaS) model to the DISA Enterprise Services Division (ESD). This model allows DISA the flexibility to deploy additional storage when and where it’s needed, but only pay for the storage actually used. We can also utilize BDNA enterprise IT data products (Discover, Normalize, and Technopedia) to augment Symantec’s capabilities.

**What Sets Technica Apart**

We provide CDM-CMaaS support including integration with legacy government technology, Endpoint Integrity tool operation and maintenance, IV&V, and CDM dashboard development and integration. Our in-house lab facility enables us to dynamically build out capabilities and solutions including proof of concept (POC) demonstration, penetration testing, feasibility determination, cross-platform integration and solution validation. We offer a fully compatible suite of applications, minimizing integration efforts, reducing “stand-up” time, and ultimately speeding return on investment.

**Technica Supports Endpoint Integrity for Continuous Monitoring**

**SYMANTEC ENDPOINT INTEGRITY TOOLS**

- Symantec Control Compliance Suite
- Symantec Vulnerability Manager
- Symantec Endpoint Protection
- Symantec Risk Automation Suite
- Symantec Critical System Protection
- Symantec PGP Whole Disk Encryption

**Technica®**

Technica Dulles, VA (HQ)
